Document: COMPUTER NETWORKS NOTES.pdf

Summary

****Document Summary: Web Documents Classification**** ****Executive Summary**** This document provides an overview of the classification of web documents into three broad categories: static, dynamic, and active. The categorization is based on the time at which the contents of the document are determined. The document discusses the characteristics of each category, including static documents, dynamic documents, and active documents. ****Key Points**** - Web documents can be grouped into three categories: static, dynamic, and active. - The categorization is based on the time at which the contents of the document are determined. - Static documents are fixed-content documents created and stored in a server. - Dynamic documents are sometimes referred to as server-site dynamic documents. - Active documents are sometimes referred to as client-site dynamic documents. ****Important Dates**** - No specific dates are mentioned in the document. ****Risks**** - None mentioned in the document. ****Action Items**** - None mentioned in the document. Note: This document appears to be a repetitive copy of the same information, suggesting that there may be an error in the document or that it is a draft that requires further editing.

Insights

Here are the extracted information: ****Dates:**** - No specific dates are mentioned in the text. ****People:**** - No specific people are mentioned in the text. ****Organizations:**** - No specific organizations are mentioned in the text. ****Money:**** - No specific amounts of money are mentioned in the text. ****Risks:**** - No specific risks are mentioned in the text. However, there is a mention of potential risks associated with dynamic and active documents, but it is not explicitly stated. The text does mention that active documents are sometimes referred to as client-site dynamic documents, but it does not discuss any potential risks associated with them.
